Heating Cooling & Electrical PTL

Save On Your Energy Bills

What Are VEU Rebates?

Victorian Energy Upgrade rebates are financial incentives administered by the Victorian Government to help residents save money when purchasing energy-efficient heating and cooling products.

When you install an approved system through an approved installer, you can receive a discount applied at the time of purchase. These energy-efficient products are designed to lower your energy bills and also contribute to reducing greenhouse gas emissions, making them a smart choice for your home and the environment.

How Does It Work?

- 1. Choose an Eligible Unit**
We will help you find an appropriately sized and approved product.
- 2. Get an Upfront Discount**
We apply the rebate to your invoice, reducing installation costs with minimal effort.
- 3. Relax & Enjoy!**
You have an efficient product installed by a quality installation company.

Who Is Eligible?

Homeowners

If you own a residential property in Victoria, you are eligible for the VEU rebate when installing an approved energy efficient heating and cooling product.

Business Owners

Businesses that have an energy efficient heating and cooling product installed can also benefit from the VEU rebate, reducing both installation costs and ongoing energy bills.

Rental Property Owners

Landlords who upgrade heating and cooling products in their rental properties to energy-efficient systems can qualify for the VEU rebate, making their property more energy-efficient for tenants.
